METEOROLOGICAL AND GEOASTROPHYSICAL ABSTRACTS is a monthly publication devoted to:

A. Current Abstracts in English on important meteorological and geoastrophysical literature in every language.

B. Bibliographic references to other items of interest to the profession.

C. Selective, annotated bibliographies on subjects of immediate and special interest to meteorologists, geophysicists and astrophysicists.

SUBSCRIPTION RATE: $60 ($15.00 per year to members). Prices for single copies $10 ($5 to members); back issues $6 ($3 to members); back volumes $30 ($15 to members); Vol. 1–10 complete, $200 $100 to members).

ERRATA—VOLUME 11, 1960

Note: In the following list only more important errors are included. Discrepancies in style, punctuation, accents, capitalization, transliteration, subject headings, etc. are not as a rule listed; nor are errors in the monthly indexes of each issue where these errors are corrected in this volume index. Errors of fact which have come to our attention, mistakes in spelling of the names of authors, and errors in title, journal entries or pagination are included. Any errors which have been overlooked should be called to our attention (by post card, addressed to: **Meteorological and Geoastrophysical Abstracts,** Box 1736, Washington 13, D. C.)

CUMULATIVE AUTHOR INDEX

Vol. 11, No. 1–12, Jan.–Dec. 1960

Note: In this index, author entries are arranged alphabetically, and under each author, the titles are likewise arranged alphabetically by the first word of the title.

Authors and titles mentioned in the body of an abstract have also been indexed. References to authors and titles found in Part III (Translations and Contents of Journals) are included in the index.

Authors whose names begin with an article or preposition (van, de, di, le, la, etc.) are generally indexed under that article or preposition. Cross references indicate variations from that practice, or possible alternate entries.

Titles have been shortened by eliminating articles and by omitting the end of long titles where feasible.

In this index all titles are listed under the first author. Co-authors, if any, are mentioned after the title.

Government Contracts, Projects, etc. are listed separately at the end of the Author Index. A separate Translations Index also appears at the end of the Author and Contract Index. Translations are indexed under the name of the original author, not the translator.

CUMULATIVE SUBJECT INDEX

Vol. 11, No. 1–12, Jan.–Dec. 1960

Note: In this index, the subjects have been arranged alphabetically as in a dictionary or glossary. Related subjects may be found by consulting the classified **Collected List of Subject Headings** in previous annual indexes (Vol. 1, p. 932; Vol. 2, p. 1184; Vol. 3, p. 1494; and Vol. 4, p. 1587).

Titles of articles are omitted in the **Subject Index.** These may be found by referring to the **Author Index** (p. 2417 of this issue).

Second or supernumerary authors have not been indicated in references since these are not necessary for positive and quick identification of the article, at least for the purpose of the subject and geographic indexes.

New concepts and additional experience necessitate constant revision of subject headings. Hence, this list will not agree in every case with entries found in the subject indexes of previous or future issues. Changes are not made, however, without considerable justification.

Geographical places used as subject headings will be found in the systematic **Index of Geographical Locations** (p. 2928 of this issue).

CUMULATIVE GEOGRAPHIC INDEX

In this index of geographical places there are three major sections:

A. Hemispheres and Regions
B. Continents
C. Oceans, Seas and Islands
(Antarctic and Arctic)

An alphabetical or dictionary type of arrangement is followed for all divisions and subdivisions of these major groups. For example, in Section B, the continents are arranged alphabetically as follows:

1. **Africa**
2. **Asia**
3. **Australasia** (Australia, Indonesia and New Zealand)
4. **Europe**
5. **North America**
6. **South America**

Within each continent the regions or main topographical features are listed alphabetically, followed by the countries in alphabetical order. No attempt has been made to distinguish between political and geographical regions or sub-regions.

Within each country all regions, states, provinces, cities or other geographical features falling entirely within that country form a single alphabetical list. Cities in Australia, Canada, the Union of Soviet Socialist Republics and the United States are alphabetized under their respective states or provinces.

In Section C the principal oceans and seas and their respective divisions have been arranged alphabetically. Islands not naturally associated with one or another of the continents have been assigned to the body of water in which they are located. Seas which fall entirely within one continent have been assigned to that continent.

Australasia includes **Australia**, **Indonesia** and **New Zealand**; **Japan** and the **Philippines** are under **Asia**, and **Greenland** under **North America.**

The Antarctic Regions include the Antarctic continent and bordering seas. It has been arbitrarily assigned to Section C on **Oceans, Seas and Islands** to preserve its analogy to the **Arctic.**

All references to the whole of the **U.S.S.R.** (Russia) will be found in the section under Europe. Places definitely in **Asiatic U.S.S.R.** (Siberia, Kazakhstan, etc.) will be listed under the appropriate country or area under **Asia.** Some of the latter may be also listed under **U.S.S.R.** in the European section.

All references to the whole of **Germany** (pre-World War II Germany) and references to places overlapping the boundary between East and West Germany will be found under **Germany** (general and undetermined). References to places within the Federal Republic and within the Democratic Republic will be listed under these two headings, respectively.
